

BENEFITS

- ✓ Quick and compact installation and use.
- ✓ Complete integration with all of your IBM i databases.
- ✓ Unification of manipulation, distribution, and publication of heterogeneous data.
- ✓ Real-time processing over all of your databases.
- ✓ No data desynchronization since replication is avoided.
- ✓ Development and maintenance savings.

SQL iPlug provides to IBM i applications real-time access to heterogeneous and external databases (Oracle, SQL Server, MySQL, MS Access, Sybase, Progress) in a completely transparent manner and without requiring replication.

SQL iPlug facilitates access to tables and procedures through quick and easy Read, Insert, Update, Delete, and Call methods. Native IBM i applications monitor business data and procedures for all IBM i languages (RPG, COBOL, CL, etc.).

FEATURES

- Main functions: Read, Insert, Update, Delete, Call.
- Queries prepared with parameters.
- Procedures stored with Input/Output parameters.
- Procedures with single or multiple results.
- Complies with database server security regulations.
- Data conversion formats to and from program variables.

SPECIFICATIONS

- Supports leading database management systems such as Oracle, SQL Server, MySQL, MS Access, Sybase, and Progress.
- OS/400 V4R5 and higher.
- ILE and OPM interface.
- For batch or interactive programs.
- Compatible with all OS/400 AGL's.
