CONSULTING & EXPERTISE

Using proven methodology, the experts at **AURA Professional Services** study your requirements and environment and recommend the most appropriate architecture and customization. They then plan and evaluate your project while also assessing associated risks.

Our approach is progressive and includes all or part of the following:

- Understanding current needs and constraints relevant to your solution's architecture specifications.
- Modeling of data flows and recommendation of architecture.
- Organizing, planning, calculating preliminary and implementation budgets.

AURA Professional Services experts can either be incorporated into your project on a general basis or used to meet occasional audit or expertise requirements.

IMPLEMENTATION AND INTEGRATION

Anticipating a System i migration, modernization, or networking project? **AURA Professional Services** experts implement extraction and formatting processes and disseminate your data to and from your IBMi, thereby accelerating value creation without adding costly changes.

AURA Professional Services is at your disposal to integrate an end-to-end solution at your company, from the study phase through acceptance:

Phase 1: Study

- Study of requirements and environment.
- Design specifications.

Phase 2: Implementation and Integration

- Connecting to data sources.
- Data processing.
- Checking validity of reprocessed data.
- Creating interfaces and/or presentation models.
- Custom implementations.

Phase 3: Acceptance and skills transfer

- Unit tests and data dissemination.
- Load tests and acceptance.
- Skills transfer.

AURA Equipements is also able to provide implementation and integration services via its network of partners for these related technologies:
